Bangladesh COVID-19 Travel Update – April 2, 2021

International Restrictions:
*Entry to Bangladesh: Bangladesh authorities have said passengers arriving from coronavirus-affected countries, including the UK, should complete Health Declaration Forms and Passenger Locator Forms provided by cabin crew. You may be subjected to additional health screening measures at the airport. *Medical certificate: On arrival in Bangladesh, all foreign nationals need to produce a medical certificate issued within 72 hours of travel indicating the passenger is COVID-19 negative. You should arrange to take a private test.

*Quarantine requirements: Until 3 April, those arriving from, or transiting, the UK are required to quarantine at a government facility, or government approved hotel, where they will be tested for COVID-19 after seven days. Those testing negative for COVID-19 in that test will be allowed to complete the remainder of a 14 day quarantine period through 'home quarantine'. Those testing positive will be transferred to a designated government hospital where their remaining quarantine period will be assessed and determined. For those arriving from locations other than the UK, health officials at the point of entry to Bangladesh will assess whether you are able to self-quarantine for 14 days or need to be taken to a government facility or government approved hotel.

From 3 April, passengers, regardless of nationality, originating from Argentina, Bahrain, Brazil, Chile, Europe (not the UK), Jordan, Kuwait, Lebanon, Peru, Qatar, South Africa, Turkey and Uruguay will not be permitted to enter Bangladesh. Whilst transiting through these countries is permitted, should you exit the airport at your transit point your COVID-19 negative certificate will become void. You will then be required to complete a period of institutional quarantine on arrival in Bangladesh for a minimum of four days and until you are able to test negative for COVID 19.

From 3 April, passengers, regardless of nationality, originating from the UK or elsewhere (excluding Argentina, Bahrain, Brazil, Chile, Europe, Jordan, Kuwait, Lebanon, Peru, Qatar, South Africa, Turkey and Uruguay), will be subject to an assessment by health officials at the point of entry to Bangladesh. They will assess whether you are able to self-quarantine for 14 days or need to be taken to a government facility or government approved hotel.

Passengers with a No Visa Required certificate (an arrangement for foreign nationals of Bangladeshi heritage) arriving in Bangladesh without a medical certificate indicating they are COVID-19 negative, or such passengers who display symptoms, will be transferred to a government facility where their quarantine period will be assessed and determined.
